EXPRESS FOLDING WORKBENCH

4.3 (6)

[WRITE A REVIEW](#)

The Express Folding Workbench allows you to create a workspace anywhere in under 3 seconds. It is compact and easy to maneuver around a jobsite or garage and nicely folds for compact storage. The large work surface with holes throughout allow for easy clamping during difficult projects. Its metal legs support 1,000 lbs of weight, great for those heavy-duty projects.

Sturdy, Portable, Versatile

Bought this at Home Depot last month and have used it regularly off site and in my workshop. It is easy to fold, set up, transport, and carry--the instant up feature works very well. Solid when it is set up. The DeWalt clamps work great, especially the larger ones with the removable ends that allow you to fit them into the many holes in the table. All other clamps work in the large X in the center of the table; the plastic top is very thick so the clamps work much better in the precut holes and X than on the sides. Clamps hang handily on the opening handle when not in use, and the 9' DeWalt tape measure affixes magnetically to the metal leg of this table. Thought DeWalt might have some accessories for this table--it would seem a logical centerpiece for a work table system--but haven't seen any yet. Had been looking at a variety of other tables when I saw this one; I like the design of this and would certainly buy it again.

Good bench for the price

Needed a bench/table that was portable and didn't cost and arm and a leg to put a Table Top Wet Saw on.

Over the last few weeks I've beat on and drowned this table a dozen times and it still works flawlessly. I even did a little Demo/Review video of this table.

I've see a lot of reviews on this table/bench and most of the "complaints" in my opinion are from expecting way too much from a light weight portable table.

If you try to put a big portable table saw on this and start ripping 4x8 sheets of plywood, you'll likely be disappointed. I likely the same with trying to use a hand

disappointed. Entirely the same with trying to use a hand plane, but then again I'm betting these people didn't think to try putting a couple sand bags on the leg cross bar.

Great table but legs suck

I bought this table about 2 months ago. I used it a few times and it started with this issue. They state this is a 3 second set up time for this table and it is but for whatever reason my table doesn't want to open. I have to push the button and pull the handle a stupid amount of times before it springs open. I'm sure it's just a defect and I am hoping dewalt will replace it at no charge. I'm a Milwaukee fan but since milwaukee didn't have this I bought it but I'm not happy with how this table is performninv right now. Please make it right dewalt!

Nice table I bought this product at Home Depot

Wow, is this nice. Very sturdy and yet lightweight. Opens and closes in seconds. Holes in the table top are a nice feature so you can clamp your work Down. I liked it so much I bought another one.

Excellent work bench

I bought this workbench 2 weeks and I'm really impressed. Opens easy and very sturdy.

Plastic top, flimsy legs, at least it stores flat.

I like the idea behind this workbench. It is compact and reasonably light. For me, there is too much sway back and forth, and side to side when this is upright. The notion that Dewalt trigger clamps can be used with this to hold down a workpiece is attractive. Unfortunately, there is really very little on the belly of the table top for a clamp to grip. At the most, your clamp will grab a fin of the plastic webbing underneath. Perhaps we are best served by clamping at the edges of the table, where the plastic is beefy both top and bottom. As other reviews have noted, I too cannot get the table to open up without a bit of help by pulling the legs out manually. A good product for basic rough work, but not terribly stable for

hand planing or other activities that require a secure work surface. Would have been nice of Dewalt to provide (or at least make available) pegs that fit into the table's holes to keep materials in place. Yes, will maybe hold 1000 pounds, only if the weight is evenly distributed across the work surface. There are little warning icons stamped into the product to illustrate this. I think this workbench would have been a better value if the silly holes were either executed better or simply abandoned in favor of a stronger top and sturdier base.
